

## KIRK WIRELESS SERVER 600V3 MULTI-CELL 1.9GHZ SOLUTION

---

### SERVICE NEWS 158

#### WHAT'S NEW

The KIRK Wireless Server 600v3 now supports SIP Protocol on Samsung OS2700 SW 4.11, Nortel Communication Server 1000S/M V.2121, SW 450 and Broadsoft R13.

#### KIRK Wireless Server 600v3 Multi-Cell 1.9GHz Solution

With this radio firmware upgrade, the previous synchronization bug on the KIRK Wireless Server 600v3 multi-cell 1.9GHz solution has been corrected. Therefore, it is necessary to upgrade your KIRK Wireless Server 600v3 multi-cell system with the SW 07-60663, 07-60663.XX, 07-60666 and 07-60992 in order to make the system work together with a 1.9GHz solution. In the following text, you will find a description of how to go through the upgrade steps.

#### TECHNICAL INFORMATION

##### Actions before upgrade:

- Visit [www.kirktelecom.com](http://www.kirktelecom.com) and download the software (Radio File Name BMC version PCS04Ef.bin) to your PC or PC Network
- Backup all KIRK Wireless Server 600v3 configuration files before the update is performed

##### Actions during upgrade:

- It is recommended to update on-site
- Update the BMC version 04Ef software
- Restart the system

##### Actions after upgrade:

- Make a complete test of the system and connected handsets
- If you have an open ID Case, please test that your problem has been solved. Please report to KIRK telecom, when the problem has been solved

##### Note:

- IP Firmware 07-60663, 07-60663.xx, 07-9-60666 and 07-60692 and BMC version 04Ef might not be working together with previous released firmware or BMC SW. Therefore, as soon as the update has started, both software types must be updated before the unit will work again
- All KIRK Wireless Server 600v3 units in the same multi-cell solution must be updated
- Update time for each unit: approx. 5 minutes
- System downtime: from approx. 1 to 3 hours depending on system size
