

## KIRK WIRELESS SERVER 1500 CISCO CUCM 6.0 COMPATIBLE

---

### SERVICE NEWS 159

#### WHAT'S NEW

The IP interface card for the KIRK Wireless Server 1500 is now compatible with the Cisco CallManager (CUCM 6.0) using the SCCP Protocol.

#### **KIRK Wireless Server 1500 - Cisco CUCM 6.0 Compatible**

The features supported in the KIRK Wireless Server 1500 when integrated with CUCM 6.0 are the following:

- CLIP number
- Call hold/retrieve
- Call forward
- Conference (participation)
- Group pick up
- Internal / external ring pattern
- Music on hold

To make your KIRK Wireless Server 1500 compatible with the CUCM 6.0 using the SCCP Protocol, it is necessary to upgrade the KWS1500. In the following text, you will find a description of how to go through the upgrade steps.

#### TECHNICAL INFORMATION

##### Actions before upgrade:

- Visit [www.kirktelecom.com](http://www.kirktelecom.com) and download the software (IP firmware: 06-505V, IP file name: 14088500\_05V.bin) to your PC or PC network
- Backup all KIRK Wireless Server 1500 configuration files before the update is performed

##### Actions during upgrade:

- It is recommended to update on-site
- Update the IP firmware 06-505V
- Restart the system

##### Actions after upgrade:

- Make a complete test of the system and connected handsets

##### Note:

- IP firmware 06-505V must use Flash SW PCS02B\_ or higher
- All KIRK Wireless Server 1500 units in the same solution must be updated
- Update time for each unit: approx. 5 minutes
- During update the system is down
